

Kombucha bioleather

...

## RECIPE

### Ingredients

1. Hot water - 7 cups
2. Black tea - 4 bags
3. Sugar - ½ cup
4. Plain kombucha drink - 1 cup  
You can buy it at the store. Wait until the tea is cooled off to add this ingredient in the mix.
5. Optional: SCOBY (symbiotic culture of bacteria and yeast) if you can find one

### Tools

- Cooker or stove (optional: temperature controlled)
- Pot, Scale, Measuring spoons, cups
- Container (glass jar, PVC tapper).
- Sanitizing supplies: gloves, alcohol, paper towel, saran wrap
- Cloth, rubber bands
- Clean surface to dry the kombucha bioleather

## Instructions:

### 1. After growth:

- Wash the SCOBY in soapy water to get rid of any impurities on the surface of it.
- The thickness of your SCOBY will reduce to 80-85%, that's why you should let it grow as much as possible (1")
- Clean area to avoid contamination

### 2. Drying process:

- Let your kombucha bioleather dry out in a ventilated area, under a fan, or under the sun. It should be a clean area.
- You can press it with a texture screen
